NUMBER 24.

Jimmy MacPhee Passes Away

A sad death occurred in Raymond Tuesday evening, when Jimmy, eldest son of Mr. and Mrs. J. H. L. MacPhee passed away in St. Michael's Hospital from gas gangrene poisoning, following an accident that happened about nine days previously.

He was hauling grain from the combine on R. J. Fanett's farm to Craddock, and was right at the corner on the main road, ready to turn onto the Craddock road when in applying the brakes, some of them grabbed harder than others, and the 85 bushel load of wheat was turned over, crushing his left hand, which was out of the cab window when the truck went over. At least that is as near as the story can be pieced together Jimmy was alone at the time and that is as near as he can remember it. He remembers having his left hand out of the window when the truck commenced to tip.

He was taken to the hospital as soon as the accident was discovered and the only broken bones were his little finger. The back of his hand was raw almost to the bone where the flesh and skin was scraped off, but outside of a bad shaking up he seemed to be alright. The bruised arm was thoroughly cleansed and was watched very closely, doctors thinking it probable that the hand could be saved if constant vigilance were exercised.

Everything was done that was possible, and up until Saturday Jimmy seemed to be progressing. The parents were called to the hospital, however, Saturday, and when the seriousness of his condition was realized a toxin was obtained from Calgary to try and counteract the poison. This brought some temporary relief, but the gangrene kept travelling and despite all that could be done, he passed away between five and six p.m. Tuesday afternoon, his parents being at his bedside when the end came.

The funeral will be held Sunday afternoon at 2 p.m. in the Second Ward Church with Bishop J. H. Walker in charge. The sympathy of the community goes out to the bereaved parents in the loss of their eldest son who was just budding into manhood and was beginning to take his place in the world.

SOCIAL CREDIT MEETING

Mrs. Edith Gostick, Dr. J. L. Robinson and A. V. Bourcier, all members of the Provincial legislature will address a public meeting in the High School, next Wednesday, September 14 at 8 p.m., to which the public of Raymond and district is invited.

LIBRARY NEWS

The Library Board held its regular meeting Thursday afternoon. Aside from the admiring and comments on the painting that was in progress, routine matters occupied the time of the meeting.

This week's most asked for book was "You Can't Have Everything" by Norris.

Lugh Walpole's books were read more than any other books on the shelves.

NEW BOOKS

"The Red Lamp" by Mary Roberts Rinehart.

"Book of Miracles" by Hal Burton.

MAGAZINE ARTICLES
"Birth of a Doll" in Popular Science. Being on the making of a little girl's doll.

"Henry Ford, Teacher" in the Forum. A little about Henry Ford and what he is doing today.

Watch for Ann Linbergh's new book "Listen, the Wind."

NEWS NOTES

Reece Allred of Hill Spring was in Raymond on Thursday.

J. C. Sawyer was at the bank again Tuesday morning after his two weeks vacation.

Let the Editor harvest his crop too. Drop in with your subscription. It is due and unpaid. We thank you.

T. C. Rees, printing supply salesman of Winnipeg, Manitoba, was at the Recorder office last Friday evening.

If the elbows are solidly planted on the table, a quarter of a watermelon can be a balanced meal.

The body of Daniel C. Dodge drowned in Georgian Bay three weeks ago, was recovered Wednesday near the spot where he fell out of the speedboat as his young wife was speeding him to medical assistance after an accident with dynamite.

Don Wahl returned to Raymond Friday evening for a few days visit here from his home in Salem, Oregon. He reports the family all busy and his wife's health very much improved over what it was when the family left here.

770 students are enrolled in Raymond's two schools now, with 250 at the High School including 90 Public School pupils, and the other 520 or so at the Public School under Principal Hicken. This is the heaviest enrollment for this early in the school year that Raymond's schools have ever had. It begins to look like another school building.

Lydell Roberts was the guest speaker at the Rotary luncheon Monday at noon. He gave a very interesting talk on the Friendly Islands, its history and folk lore. Lydell is just home after spending three years there on a mission. This was the first noon luncheon for some time and was very well attended which was much appreciated by the executive who have been worried over the small attendance.

The Town Hall corner is improving in appearance all the time. Mr. Perks has lovely flowers and shrubs around it, and at the end of the week Harry Johnson removed all the grass from the street in front of it which certainly made a big improvement in the general appearance of the corner. With the memorial, flagpole and Town Hall all on the corner together it is one of the civic beauty spots.

The Second Ward Church and its surroundings is a real beauty spot this year, with its lawns, trees and flowers. Frank Jance and Geo. Fairbanks have been busy this week putting in a cement trough for carrying the irrigation water, without having to unduly flood the lawns. The Bishopric is to be congratulated on the appearance of this lovely corner.

Keith Williams of London, England, British financier is said to have submitted a plan to the Provincial Government at Edmonton for co-operative buying and selling of a long list of items, which he claims would save the people of the Province \$12,000,000 annually. He has offered his services to the government to establish his plan, which would include establishment of factories throughout the province to do away with freight rates.

Funeral Services For Mrs. Kate Smith

A very large crowd of friends and relatives were in attendance at the funeral services Wednesday afternoon over the remains of Mrs. C. B. Smith, who passed away Friday last week in the St. Michael's Hospital, Lethbridge, following an operation. Mrs. Smith's death was a distinct surprise to everyone, as she was in splendid health and spirits when operated upon and went through the operation in amazingly good condition, a hemorrhage after the operation being the cause of death.

The services were in charge of Bishop Walker, with Jos. McLean conducting the Choir and Mrs. Paul L. Dahl at the organ. The hymns by the Choir were "Thou Deepening Trials", "Jesus, Lover of My Soul" and "Resting Now from Care and Sorrow." Special musical numbers were vocal solos by Mrs. Blanche Scoville and Jos. McLean.

The opening prayer was by Elder Wilford Heninger of the Bishopric and benediction by Elder Arthur Dahl, ward General Chairman of which committee deceased was a member.

The first speaker, Elder J. W. Evans, former bishop of the Raymond ward who spoke of his long years of acquaintance with the family of deceased both before and after she was married. He mentioned the sacrifices her parents made in financial and social position when they accepted the message of the Gospel and joined the Church. Deceased was a woman of cheerful and sunny disposition, always taking life with a smile and she would be missed by everyone, as she had always been very active in the organizations of the Church.

Elder John F. Anderson was well acquainted with the father of deceased, and he well remembered the day that he had been asked to perform the marriage of deceased and her husband. He felt sure that Mrs. Smith was as happy in the spirit world as she would be were she still here and he asked the blessings of the Lord on her husband and her children who were left to mourn her passing.

Elder Clarence Allred spoke of the fine family of deceased, and the fact that three of her sons were acting as pall bearers. The Mormon elders had found the Lee family in the State of Florida, and one by one the members of the family had accepted the truth and been baptized, soon thereafter moving from Florida to Alberta and Raymond. The father, of Mrs. Smith was a man of means when he arrived in Canada, but the different conditions that had to be met with, and his lack of knowledge of Canadian ways had proved costly to him in money matters, but withal he was optimistic and above all true to the Church he had joined. Speaking of a conversation with deceased a short time ago she had expressed the hope that conditions would soon be such that one or two of her boys could be maintained in the mission field, showing a deep devotion to the Church even in her illness.

Elder James S. Anderson read from a sermon by Joseph Smith, and then in speaking of personal experiences with family of deceased he told of her faith in the Priesthood in the healing of the sick, and related an experience he had with one of the boys who was taken violently ill, and whom the Doctors said would have to be operated on. The elders administered to him and the next morning the improvement was so marked that the doctors said an operation would not be necessary. This, said Elder Anderson was the kind of faith that the deceased mother possessed.

Bishop Walker, on behalf of the family thanked all who had assisted in any way during the illness and death of Mrs. Smith, and added his tribute to the other speakers as to the faith and fidelity of deceased to her Church, never refusing to answer any call that was made and always serving willingly and cheerfully.

Interment was in the local cemetery with Christensen Bros. in charge, a large cortege followed the remains to their final resting place.

NEWS NOTES

A disagreeable wind and dust storm prevailed for a couple of hours Sunday evening. There were a few drops of rain but not enough to wet anything.

John H. Blackmore, M.P. Cardston, and John F. Anderson, Cardston, former bishop of Raymond were here Wednesday for the funeral of Mrs. C. B. Smith.

The Zabriskie and Taylor families spent Labor Day at Waterton Park, and despite some wind and a threat of rain Arnold and Frank played 36 holes of golf on the beautiful Waterton course.

Mr. and Mrs. Mirza Pack and children left Wednesday for the return trip to their home in Sudbury, Ont. During their stay here Lambert and the boys have enjoyed several very fine fishing parties.

The Public School Staff had a large increase Tuesday when 103 beginners applied for admission to the school. Principal Hicken had planned on about 90, but the extra 13 with some repeaters was a surprise and a problem to him and all the other teachers.

Ralph Brothers have bought a new International 2 ton chassis for their Transport having made the change the end of the week.

Mr. and Mrs. C. A. Phipps of Kevin, Montana, spent Sunday in Raymond with relatives and friends.

The bus was nearly half an hour late Thursday night; due quite likely to the wet roads, which with the diminishing gravel thereon make rapid travel impossible.

Heber Coles was busy Tuesday doing some painting in the local library. The new shelves and the hall received fresh coats of paint which not only added to the appearance of the rooms but also increased the light in them.

James Nielson, Superintendent of Ellison Elevators was a Raymond visitor on Monday inspecting the local plant. For said they opened their new elevator at Warner last Thursday and before night the storage bins were nearly full. Grain was coming in very fast the end of last week.

Harvest Delayed

NEWS NOTES

Government officials of the Health Department were in town Wednesday evening.

A B. A. service man was at Cards Service Station today installing two new gas pumps of the Computer type.

Your subscription is due and we would greatly appreciate a renewal. Thank you very much. —The Recorder.

Mrs. D. C. Peterson of Cardston is spending a few days with relatives and friends here.

Next to setting a new weather mark of any kind, making history is the most painful thing.

Mr. and Mrs. N. T. Macleod, Calgary, spent Thursday night with Mr. and Mrs. H. A. Christie and family.

It takes all kinds to make up the sex—the womanly ones, and the others, who look well in shorts.

Mr. and Mrs. Fred Piepgrass are spending a few days in Kalispell, Montana with their daughter, Mrs. Mitton. They left Raymond Friday morning.

Byron Tanner and Chris. Hansen of Lethbridge were Raymond business visitors Thursday of this week.

Mr. and Mrs. Arthur Dahl and Mr. and Mrs. S. I. May were in Cardston Sunday to a Temple worker's meeting.

THE REASON

"Yes! I had a beard like yours once, and when I realized how it made me look I cut it off."
"Well, I had a face like yours once, and when I realized that I couldn't cut it off, I grew a beard."

MORE TROUBLE FOR COTTON

Cotton grown in the United States sets the standard for the world. Much cotton is grown elsewhere, but little of the long staple crop which has brought both wealth and poverty to the South. But if the world outside America grows more cotton, whatever its quality, the effects are bound to be felt in the cotton States.

There is grave apprehension in the South over the social and economic effects which are likely to follow the introduction of a successful cotton-picking machine. Another reason for anxiety is that Argentina is ready to adopt mechanical cotton-picking. The National Cotton Board of Argentina, in recommending the use of cotton picking machinery, says that the substitution of machine power for man power will not create unemployment, since Argentina faces a shortage of labor in its cotton-growing areas.

But by the shift to machinery, it is said, "the sown area will be greatly increased in zones where the population is relatively sparse." The world cannot hardly use the cotton it has but Argentina hopes and intends to grow more. And the cotton-picking machine, whose shadow is already over this country's plantations, will be responsible.

Rain, rain go away, come again some other day, is the anthem of wheat farmers today. Rain has held up threshing practically all week. A light rain just about noon Monday stopped harvesting for Monday and most of Tuesday. Another shower Wednesday about 4 p.m. stopped operations again, and then Thursday, throughout the entire forenoon, rain fell nearly steadily, and even combines will not be able to turn a wheel until Monday at least. Probably 40 p.e. of the wheat crop is either threshed or combined.

Many fields are cut and stood, and this grain will be alright. Uncut fields will be O.K. if we have no hot days and wind, in which case grain will shell badly. There are some fields still waiting for combines.

Beets will benefit greatly by the added moisture as it will add weight to them and also help the sugar content when the sun comes out again on the fields. Hay and pastures will benefit, although it begins to look as if no third cutting of alfalfa will be general although a third crop will be taken off some fields.

Grain is averaging well, elevator men estimating the marketable crop at around 900,000 bushels, possibly to 925,000 practically all of it grading No. 1, and the estimated average yield at 32 bushels per acre.

J. GOLDEN KIMBALL KILLED IN AUTO ACCIDENT

J. Golden Kimball, aged 83, one of the First Presidents of Seventies in the Church, and a brother of Hyrum Kimball of Raymond, was instantly killed Friday night of last week while motoring in Nevada.

The story states that with other relatives, they were travelling on the main highway and came to a detour sign made necessary by a washout in the road. The driver apparently misjudged the speed of the car and when he tried to turn off the main road, the car tipped over and Elder Kimball was instantly killed, from reports being the only one in the car seriously injured.

He was a popular speaker amongst the General authorities and had visited the States in Southern Alberta on many occasions.

HARD SURFACING ALBERTA SYSTEM

Some 200 miles of Alberta highways have been given bituminous surfacing this season, according to an official report which the Alberta Motor Association has received from the provincial public works department.

Started earlier in the year, many of these bituminous surfacing projects have been completed, leaving only a few to be finished in the next few weeks.

The "seal coat", which is second course surfacing, has been laid on an extensive part of the main highway system this year. Stretches between Edmonton and Millet, Calgary to Banff and Calgary to Okotoks, have been included in the "seal coat" program.

The public works department also has been engaged with 127 miles of gravel surfacing and 66 miles of grading, all forming a part of the current season's program.

Given fair weather conditions, the program undertaken last spring and summer will be completed shortly, according to officials of the public works department.

Thus the provincial highway system is being improved to make Alberta and the more attractive to the motor tourist.

A CHANCE TO ASSIST

School is on again. The 750 or 800 students of the Raymond schools have been called back to their desks and have commenced on their 200 days of schooling for the current year.

Raymond should feel proud of the splendid staff of teachers we have. Men and women who both by precept and example are teaching the boys and girls to LIVE. The lessons that they are taught from their books are important, but overshadowing these are the lessons they are learning from day to day which build character in them, and shape their lives either for good

or bad. Because our corps of teachers are efficient in the teaching of the curriculum, and are also teaching and building character is one reason why Raymond should be specially grateful for such leaders for their children.

There is, however, one vital point where parents and guardians can assist not only in making for greater success in the scholastic subjects, but also in building character in the boys and girls, and that is the matter of discipline. We are of the opinion that unless a parent knows absolutely that a teacher is in the wrong with respect to correcting children they should uphold the teacher in the corrective measures that are applied. Every boy and every girl has a little of the seeds of mischief in them. They never go through school without getting into a few scrapes, and if the teacher feels that a child has parents who will condemn him or her for every correction they inflict on that child, then they hesitate to do what they know should be done. The result, a child that is uncontrollable to a large extent and a menace to society in many cases.

We are not maintaining that a teacher is always right. Unfortunately a teacher allows his or her nerves to become frayed and will make mistakes. But far better to uphold the teacher before the child at any rate, and then go quietly to the teacher and straighten things out, than to fly off the handle and condemn teachers in front of the children. Everyone appreciates respect and obedience. We may get it.

Another point is the preparation of lessons. Students who attend shows and dances on the nights during school week are hardly able to give sufficient preparation to lessons to make the proper showing. Work and play should be arranged so that if mid-week entertainments do arise, homework may be prepared first either in study periods, or at home before entertainments start so that the student is prepared for his next day of schooling.

A good honest co-operation on the part of parents in these two matters would do a great deal to raise the passing averages of our schools and would make for a far higher average percentage throughout all the grades. When we consider that a third of the child's day for twelve years is spent in school to get him or her out of High School, the importance of co-operation in these matters begin to assume their proper proportions and we should co-operate to the fullest possible extent in these matters.

UM!

Bride: I want to buy some oysters.

Dealer: Large or small madam?

Bride: Well their for a man with a size fifteen collar.

STATIC FREE RADIO COMMUNICATION

Static-free radio telephone communication between airplane pilots and landing field attendants may soon be a pinetrical reality. Despite thunderstorms and other atmospheric disturbances, flight tests of a new ultra high frequency apparatus show the system to be substantially impervious to adverse weather.

The system was designed for the Northern Electric Company by Bell Telephone Laboratories and has been tested in co-operation with certain established Airlines, under actual flying conditions. Should continuing tests, now being carried forward to explore the new system's behavior verify the initial findings, ultra-high frequency radio telephone communication at 125,000 kilocycles or 2.4 meters may soon be universally adopted and may be applied to Police and other services.

For a number of years Bell Laboratories have been actively engaged in fundamental radio research and the practical design of equipment for operation on extremely short wave lengths. Very little static—the so-called "electro-magnetic garbage" of nature—is found in this region of the radio spectrum and practical applications of these waves to police radio telephone and other land service will have their utility, where the receiving station is not removed beyond the horizon.

Early in 1938 arrangements were made for an operational test of the new equipment on the Pittsburgh-New York airway. Ultra-high frequency transmitters and receivers were installed near the airport at Pittsburgh and on top of the New York Telephone building situated in lower Manhattan. The latter equipment was controlled remotely from the dispatch office in Newark. In addition to the Bell System's own "Flying Laboratories", ultra-high frequency equipment was also installed in a skyliner, which has been flown on regular schedule between Pittsburgh and New York. Both the aircraft installations and those on the ground were made separate from the regular complement of radio equipment normally employed for airline operation.

A month's trial under actual operation conditions, during which all types of weather were encountered, showed the new system to be free from static disturbances even in presence of violent thunder storms. Rain static, another common source of interference left the equipment undisturbed and the almost total absence of background noise which usually crackles in the pilot's ears continuously proved to be an important advantage through absence of discomfort and fatigue.

The tests gave additional verification to fact that ultra high frequency transmission

will not carry for any considerable distance beyond the horizon. Like light waves, the signals travel only in straight lines and will not pass around the curvature of the earth.

Although this characteristic represents a real handicap to the general application of such short waves, it is less important to aircraft communication because the airplane's horizon is continuously expanded as it gains altitude. It does mean, however, that for ailing operation, a greater number of ground stations will be required along the line of flight than with present lower frequency equipment operating between 3000 and 6000 kilocycles. Conclusive tests have not yet been completed in mountainous terrain but fewer transmission points will likely be required in these areas as advantage can be taken of high peaks and the greater elevations on mountain ridges for equipment installation points.

ALBERTA BRIEF OUT

The "Recorder" this week received a complimentary copy of "The Case for Alberta," as submitted to the Sovereign People of Canada and their Government by the Government of Alberta.

Copies of the brief are being distributed to persons and organizations either representative of important sections of public thought or occupying positions of responsibility in the life of our nation.

"To meet the wide demand the brief is being made available at \$2.50 per copy, post paid. Orders received before September 15th, will be executed at a special price of \$1.25 per copy post paid."

"I trust that the enclosed complimentary copy of 'The Case for Alberta' will receive at your hands the careful study and thought for which the Government of Alberta pleads."

The copy was sent from the office of Solon E. Low, Provincial Treasurer.

PROPOSE BLOOD TESTS OF DRIVERS

Blood tests of all persons involved in traffic or other accidents to "ascertain if such accident occurred by reason of such person being under the influence of alcohol or other narcotic drug" was urged in a resolution passed at the annual convention of the Associated Temperance forces of Alberta, held at Edmonton a few weeks ago.

The temperance organization has sent a copy of the resolution to the Alberta Motor Association in view of the campaign that the A.M.A. has carried on consistently for safer driving on Alberta highways.

Resolution passed by the temperance organization has been sent to the Dominion Government, urging that the Criminal Code of Canada should be amended to provide for blood tests being taken of persons causing accidents.

It is recalled that in Eastern Canada there have been similar demands for blood tests of motor car drivers following accidents.

SMALL ADVERTISEMENTS

PULL

Some businessmen whose establishments are not gigantic are known to harbor the belief that because the possibilities they envision for their businesses will not warrant the use of large advertising space in the newspaper, advertising will not pay in their case.

No belief was ever more erroneous.

Small advertisements consistently placed in this newspaper week after week will bring new customers and build prestige for any business, whatever its present size.

Small advertisements are read as well as large ones, and the pulling power of an ad is gauged more by how it is written and what it advertises than by the amount of space it occupies. Some of the largest businesses in the World today, whose success is directly attributable to their persistence in newspaper advertising, started with the tiniest space it was possible to buy in the newspapers. Some started, in fact, with classified advertisements.

Many an individual has been surprised at the results obtained from a small want ad offering some discarded article for sale. Nothing appeals to people like the opportunity to annex a bargain, and second-hand goods for which the owner has no further use often is exactly what some other person is looking for.

OURSELVES OF YESTERDAY

During an intermission at a party, some prominent businessmen were discussing an absent member. Few could find anything pleasant to say about the person in question. One guest, who had worked his way to success up the ladder of many mistakes and failures, said, "That reminds me of about 20 words I once memorized from Dr. Isaac Goldberg's 'Tin Pan Alley': 'Snobbery is but a point in time. Let us have patience with our inferiors, they are ourselves of yesterday!'"

Should Be Told

"Your ticket," said the conductor to the passenger, "is for Calgary, and this train goes to Lethbridge."

Passenger (absently): "Goodness, does the engineer know he's on the wrong railroad."

Man isn't old as long as he doesn't know he has a liver.

BETTER LIGHT

- Better Lessons -

It's surprising how many country children begin straining their eyes when they look at their first picture book because of the poor, inadequate light from the old fashioned yellow flame kerosene lamp. Many of these children at school age are held back because their eyes are strained and they are unable to read.

Then, too, every member of your family would benefit greatly thru Aladdin. It banishes that sleep-like haze around a dim yellow light. Aladdin's abundant white light fills the room for eye-safe reading, sewing, sports or pastimes. In its wake is a home of brightness and happiness.

Modern White Light
Pays For Itself In Oil Saved
Burns 16 Times More Free Air
Than Oil

Aladdin burns safely without smell, smoke, trouble or noise for full 50 hours on one gallon of Kerosene (don't oil). Easy to operate - a child can do it. Certain as its economy, is the avoidance of eye strain due to poor light, and often brings the expense of an eye specialist and glasses.

New Model Aladdins
and Shades Now HERE
Beautiful Aladdins in table, hanging, bracket and floor styles are here awaiting your inspection. There's a wide variety here, too, of those handsome decorated Whipple-like shades - or in glass if preferred. You'll get a thrill just looking around.

SPECIAL on Nash's JUBILEE COFFEE ENDS SOON!

TODAY'S BEST COFFEE VALUE

JUBILEE COFFEE

THE PRINTED BOTTOM FROM YOUR JUBILEE COFFEE CARTON IS WORTH 5 CENTS

This is the last reminder to save money on your coffee needs. The printed bottoms from Nash's Jubilee Coffee 1-lb. and 3-lb. cartons are worth 5c for every pound represented on the further purchase of Nash's Coffee. For instance:

- 1-lb. printed package bottom is worth 5c
- 3-lb. printed package bottom is worth 15c

This offer is good only until September 15th.

Nash's Coffee is packed to retain its freshness and flavor. Order Nash's Jubilee Coffee today. Ask your grocer about special prices on 5 and 10-lb. cartons and pails. All containers still carry the regular premium certificates.

NASH TEA AND COFFEE IMPORTERS

EXPERIMENTAL STATION, LETBRIDGE

WEEKLY LETTER

This weekly letter is directed to the producers of poultry who are making serious effort to use their poultry as a means of adding to the farm income, but it can have no particular significance for those who keep poultry in a haphazard manner.

The time is now at hand when this year's crop of pullets will be starting to lay and the results of the owner's efforts to date will be in the production which these birds have during the next few months. It is a critical time for the pullets and only by continuing the good care which they have had until now can one expect to attain the best results.

The first step in getting the pullets into laying quarters is to thoroughly clean and disinfect the houses which they are to occupy. Cleaning should consist of first removing all the litter, thoroughly scraping and sweeping the floors and sweeping the walls, washing the interior of the building with weak lye water, then white washing it so that it will be clean and attractive. Not only should the building itself be cleaned, but all the nests, feed hoppers, troughs and drinking containers should also be thoroughly scrubbed. The house will then be ready for the birds.

It is well to place the pullets in the laying houses before they come into production so that

they may become familiar with their new surroundings, and become accustomed to the presence of the attendant. A gradual change of feed should take place at this time, from the growing mash to the laying mash, but a rapid change should be avoided as it may tend to upset the physiological functions of the birds. One point especially should be considered, and that is that the birds on range have been getting a supply of green feed and it is not wise to suddenly cut them off from this. Consequently, green feed in some form should be supplied when the birds are housed. If a succulent feed cannot be provided, high quality alfalfa meal is an excellent substitute.

Another item which should be given special emphasis is cod liver oil. While the birds were on range and were receiving the benefits of green feed and direct sunlight, the amount of cod liver oil necessary in the ration was considerably less than that which is required when the birds are confined. It is a common practice of many poultry producers to purchase either complete poultry feeds or poultry supplements which they add to farm grains. This is sound practice except for the fact that cod liver oil in such mixed feeds or supplements usually has lost its potency by the time it is used. Recent experiments in the United States have indicated that cod liver oil

mixed with feed, and submitted to ordinary room conditions, will lose up to 100 per cent of its vitamin A content in the course of 3 or 4 weeks. Consequently cod liver oil should be purchased by the poultry feeder and mixed with the feed not more than two weeks before it will be consumed. If it is mixed with the feed for a longer period than this the chances are that there will be little or no Vitamin A left, and the purpose of the cod liver oil will not be fulfilled.

Therefore, the Letbridge Experimental Station recommends to all poultry feeders that regardless of whether they buy their poultry feeds already mixed, home grown feeds, cod liver oil, buy supplements, or use oil should be added to the ration at the rate of 1 to 2 per cent of the total ration, but it should be, in all cases added by the feeder himself and should in no case be mixed with the feed for more than two weeks before the feed is used.

Our Edmonton Letter

Edmonton, Sept 6 — Publication of Alberta's brief on Dominion-Provincial relations by the Government, the reported engagement of a new "technical expert" to advise the government and the Social Credit board, and proposals by a British financier who has declared that he could create vast new wealth for the province if the government agrees to co-operate with him were among the highlights of the past week at the legislative buildings.

Continued search by the government for "something to try" and increasing evidence of suspicion among cabinet ministers at the rank and file of the Social Credit members were in evidence during the week. Premier Aberhart started it off, in his Sunday night broadcast by praying to God to "overthrow the present financial system."

By far the most important event last week was the admission by Keith H. Williams, London financier, that he has presented to the Alberta cabinet an offer, which if accepted, can mean great wealth for the province. Because he was awaiting the government's consideration of his plans, Mr. Williams refused to divulge details of them. It is known, however, that he has offered a plan by which he would bring into Alberta vast sums of British and American capital for the exploitation of the province's natural resources without cost to the government, his syndicate and the province to divide the profits. He also is believed to be attempting to arrange a re-funding program for Alberta's debt, on a system by which interest would be paid on a sliding scale, averaging 3% and based at all times on commodity prices. Under that plan there would be no assessment or payment of interest in years of depression. When a report was spread that Mr. Williams had proposed to the government a plan by which

the marked value of Alberta bonds could be knocked down still lower than their present level, in order that the government could buy in and retire the whole public debt cheaply at the expense of the bondholders, Mr. Williams declared the rumor a deliberate falsehood. Meantime observers are waiting to see whether the government accepts or rejects his proposals.

The new "technical expert," if reports are correct, is John Brinson, of Three Hills, Alberta a scheme which he is operating who is said to have claimed that in his own district and which might be applied to the whole province is, in effect, a practical example of Douglas Social Credit.

Little was known in Edmonton of Mr. Brinson or of his plan as the week opened. G. L. MacLachlan, chairman of the Social Credit board had repudiated him over the week-end, denying any knowledge of him, although the Social Credit office said that he had been there until about ten days before. Reports from Three Hills, however, indicate that Mr. Brinson's plan as being operated there is nothing more than a credit union, of the type which has been operating in the eastern provinces and in many parts of the United States for many years, and of the kind which was provided for by the Alberta legislature last spring in legislation which never has been followed by action.

L. D. Byrne, "technical adviser" who was sent to Alberta in June of last year by Major C. H. Douglas, is still on the provincial payroll and is still occupying an office in the legislative buildings. He and his family have moved into one of the finest homes in Edmonton, in an exclusive section of the city. No word of any activity by him on behalf of the government, however, has been announced for a long time.

Alberta's brief which first was to have been drawn up for presentation to the Rowall com-

ALBERTA WHEAT POOL

mission on dominion provincial relations, and then by order of Major Douglas and the legislature was withheld from the commission, was published privately by the government at a cost of well over \$20,000. The government is still expecting to sell copies of it. It has become known however that despite the heavy expense involved in its being printed by the provincial government "for the sovereign people of Canada," that brief is going to be considered by the Rowall commission just as though it had been presented in the Edmonton sitting of the commission.

Therefore all the political manipulation, secrecy and expense surrounding its publication may well be considered useless. It could have been presented to the commission last spring in typewritten form without all the expense of printing, binding and rewriting.

As finally published the brief was in two parts. The first was a resume of economic conditions as revamped to some extent after having been written by recognized economists and legal authorities; the second part was another exposition of the Social Credit theory, as presented to the legislature last spring by the Social Credit board.

The brief contained some "recommendations" which would

be very nice if they could possibly be carried out, but it was believed likely here that not even the most ardent Social Crediter could expect success for some of them. Among them were cancellation by the dominion of \$27,000,000 owing by the province; underwriting by the dominion of a refunding issue for \$133,000,000 at interest of not more than 2%; and assumption by the Dominion of all unemployment relief costs and old age pensions "until the new social order is established."

"U" AND "I"

When we separate the word "business" into its component letters, B-U-S-I-N-E-S-S, we find that "U" and "I" are in it. In fact, if "U" and "I" were not in "business" it would not be business. Therefore, if business is to remain "business", we must keep "U" and "I" in it.

Furthermore, we discover that "U" comes before "I" in business and the "I" is silent—it is to be seen, not heard. Also the "U" in business has the sound of "I", which indicates it is an amalgamation of the interest of "U" and "I" and that when they are properly amalgamated, business becomes harmonious and altogether profitable.—Bee Lines.

World's Largest Radio Marks Jubilee

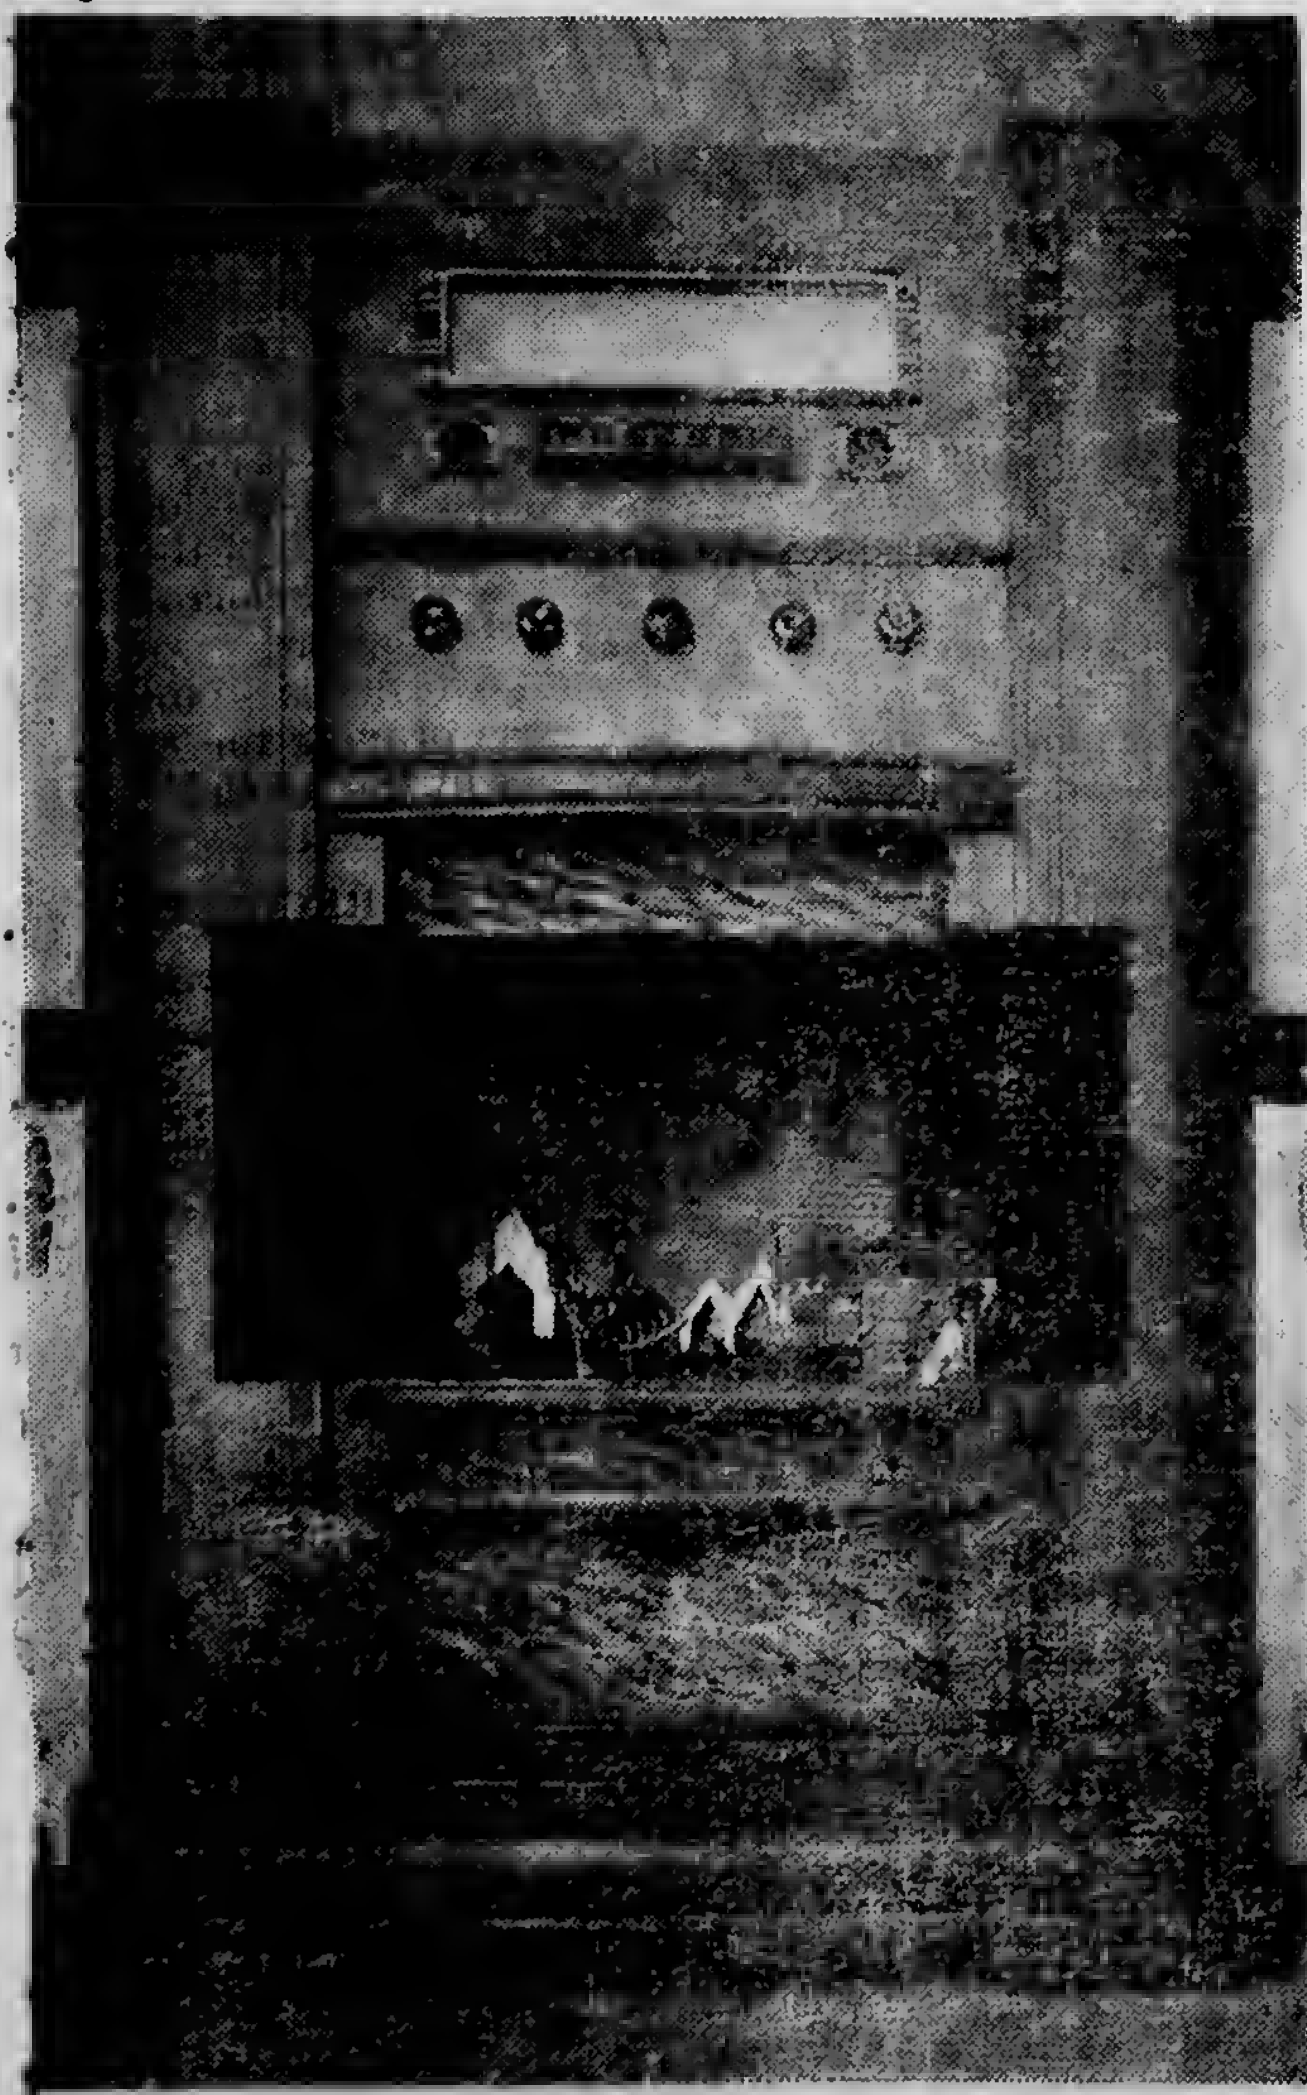

Illustration courtesy Montreal Herald

To mark the Diamond Jubilee of the Canadian National Exhibition at Toronto this year there are many unique features among which is the World's largest Radio—with an animated stage built in, on which a Marionette performance is produced eight times each day, and two special performances for children on Children's Day.

This gargantuan Radio Set, 16 feet high and 6 feet wide, is an exact copy of the new Northern Electric eighteen-tube Radio Receiver and is placed in the Company's Booth in the Electrical Building. In this Booth also is the "Talking Mirror," an ingenious device which speaks to those who use this conveniently placed mirror and invites them to view the new Microphonic Radios on display beside it.

It is Hard to Win a Good Name

In business there is only one thing harder --- to win back a good name that has been lost.

A good name can be lost by carelessness as easily as by un-businesslike methods.

To retain a good name, with a success-patronage of newcomers particularly, it has been proven that a reiteration of values and service in carefully prepared advertising is very much worthwhile.

A. N. Kessler, a former resident of the district is visiting here from his home in the States.

COW IS SHEEP IS WOOL

Sweet are the uses of adversity, and this our life finds tongues in trees, books in running brooks, sermons in stones, and good in everything. With such words did the Bard call attention to lessons we can learn from the inanimate things of nature. He had no idea of referring to ersatz, since he was no anachronist, and the alchemists, with whose work he was familiar, where uniformly unsuccessful in efforts to transmute the base into the noble. It was a long time later before alchemy gave its full fruits to chemistry, and centuries more before chemistry and other sciences turned the world topsy-turvy.

The uses of adversity may not be sweet, from the ersatz point of view, but they distinctly are utilitarian. Not only in Germany the world's chief exponent of substitution, but in many other nations are not what they seem and one thing may easily be called another and used in place thereof. The other day department of agriculture scientists in Washington predicted that a sheep will not be the only sheep, that a cow is a sheep is milk is wool, as Gertrude Stein might say, but hasn't, so far.

WHOLESALE NURSERY—

Peonies and Bleeding Hearts will be here today, prices are only one-half to one-fifth of regular retail nursery, such as "Baroness Schraeder" "Solange" and "Tourangelle" peonies \$3.00 each at Lacombe Nurseries, my price for this peony is only 60c. F.O.B. Raymond; 3 to 5 eye divisions and much superior to imported stock. Other peonies, all named from 25c. to 50c., and bleeding hearts 35c. each, will bloom next summer. These prices at Raymond. All stocks true to label and replacement guaranteed. Order now for early delivery. P. H. Nakamura, Dealer, or Winona Nursery, (Wholesale Only.)

would closely resemble the best grade of thoroughly washed and carded merino wool. Sheep are not thus put out of the running for they produce milk, too. So do goats.

ADVERTISING LOWERS PRICES

A misconception of advertising held by some is that an advertised article or service must necessarily be priced higher because the cost of advertising is passed on to the consumer.

The opposite is, in fact, the truth.

As an example, let us take the case of any department store in a large city. The facts as they exist in regard to this large advertiser will apply also to the smallest advertiser in the land.

With slight variation, the large department store appropriates two per cent of its gross income for advertising—mostly newspaper advertising. This two per cent of every dollar the store takes in pays for all the full page advertisements, advertising all sort of merchandise, that appear in the newspaper.

As a result of these advertisements, the store does probably five times the volume of business it would do were it to discontinue advertising. By buying five times as much goods as it would be able to move without advertising, the store gets the benefit of lower wholesale prices.

es that result from buying in greater quantities. Much more than the two percent outlay for advertising is saved in this way.

Store overhead is reduced as volume mounts, thus effecting another saving that is traceable directly to the full page advertisements the store inserts in the newspapers. And all of these savings are passed on to the customer in lower prices for better goods.

Newspaper advertising lowers prices. This is one of the many reasons why it pays to buy from stores whose advertisements appear regularly in the Raymond Recorder.

SUGGESTIONS TO IMPROVE ROADS

Various suggestions for improvement of highway conditions have been brought to the attention of the Alberta Motor Association and are receiving the attention of officials.

One of these is to have illuminated signs placed at highway curves, similar to those in some other provinces. Extension of the system of marking intersecting highways also has been urged upon the association, which has already done considerable work of this kind.

A large number of signs in the northern and southern parts of the province have been erected by the A.M.A. and it is hopeful of extending the system to a great extent this season. Main road signs are to be provided by the province, the locations being selected by the A.M.A.

THE DIFFERENCE

Teacher: "Tom, what is the difference between vision and sight?"

Tom: "When Ethel goes out in the evening, she's a vision; when she gets up in the morning she's a sight."

NO HOPE

The rector walking over his sunburnt lawn, said to his old gardener: "Everything looks terribly dried up. Jacob, I think I shall pray for rain tomorrow."

The old man replied: "Don't think me interfering, sir, but it ain't much use praying for rain with the wind in the north!"
